

## PRESS RELEASE

# Hubject and Star Charge China form the world's largest charging network

- **Two of the leading international providers of charging networks for electric vehicles, Hubject and Star Charge China, have now entered into a collaboration**
- **Star Charge will introduce its Chinese network to Hubject's charging network and open it up to additional market participants**
- **Hubject will help Star Charge to enter the European market**

*Berlin/ Shanghai, October 1st 2018* – The charging networks Hubject and Star Charge China have now begun working together. With this collaboration, the companies are looking to drive the global development of open, customer-oriented charging networks for electric vehicles. The charging infrastructure expert Star Charge will bring its network of 20.000 charging points to Hubject's cross-provider charging network, becoming the first Chinese partner to join the network, and thus open the network up to other market participants. In turn, the Berlin-based eMobility pioneer Hubject, which is now also active in the USA and China, will help Star Charge to enter the European market.

The collaboration will accelerate further market development in relation to eMobility and support the emergence of standardised market models worldwide. This is entirely in keeping with Hubject's vision, which is to enable all drivers of electric vehicles to charge their vehicle as easily as possible wherever they are. With the help of Hubject, Star Charge will bring its considerable experience from China, the world's largest eMobility market, to Europe, where it will set a positive course for development. Together, Hubject and Star Charge are building the world's largest international network with a total of over 100.000 charging points. Hubject has been operating in China for almost a year. The company has its own office in Shanghai. The new collaboration with Star Charge is the first key milestone of Hubject's activities in China.

'We are pleased about the collaboration with Hubject, as we can now offer convenient access to our network to even greater numbers of people, both in China and in Europe,' says Shao Danwei, CEO Star Charge.

‘In Star Charge, we have found the perfect partner in China who will help us to push on with our vision of customer-oriented charging in this very important market,’ says Christian Hahn, CEO Hsubject.

### **About Hsubject:**

Hsubject simplifies the charging process for electric vehicles. With the help of its eRoaming platform, the eMobility specialist connects charging point operators and eMobility service providers in its interchange network, thus providing standardised access to charging infrastructure. With over 80.000 charging stations and more than 300 B2B partners across 26 countries, interchange is the world’s largest cross-provider charging network for electric vehicles. Hsubject enables eMobility to make a breakthrough worldwide.

Hsubject GmbH was founded in 2012 and is a joint venture of the BMW Group, Bosch, Daimler, EnBW, innogy, Siemens and the Volkswagen Group. Hsubject’s headquarters is located in Berlin, with additional branches in San Francisco, Los Angeles and Shanghai.
